ENJOY THE OUTDOORS

PANORAMIC GLASS DOORS

KE panoramic glass doors belong to the closing options for GENNIUS structures, featuring no-profile doors and a floor guide reduced to 20-mm height.

Easy to install and practical to use, this is the ideal closing system to make the outdoor space available all year round.

It can be used in different situations, creating new spaces and taking full advantage of the old ones.

The transparent glass reduces the aesthetic impact on the existing architecture and allows people to enjoy a limitless view while being protected against bad weather.

The lower tracks make the panels move smoothly and practically – one of the reasons why this system is functional and easy to use.

PANORAMIC GLASS DOORS
