

WINTER COVER SAFETY INFORMATION FOR EXISTING CUSTOMERS

SAFETY NOTE: If winter cover is installed on a motorized awning, it is very important that the awning motor not be operated until after the winter cover is removed from the awning system. If the awning motor is operated, the fabric will unroll inside the winter cover. If this happens, when the winter cover is removed, the powerful spring-loaded arms will cause the awning to go out in a violent extension possibly causing personal injury.

SAFETY NOTE: For safety reasons it is important to shut the power off to the awning before installing the winter cover and every time the cover is in place.
