The Isola 2 is a beautifully crafted, retractable roof, aluminum pergola system. It is a waterproof structure, installed level, with no slope required. Isola 2 can be installed as a freestanding unit, wall mounted as shown above, or as a retractable roof over any suitable, pre-existing substructure.

Isola 2 differs from other Genius products in that its roof is slightly arched to direct rainwater into a system of hidden gutters around the perimeter. Water drains down through the columns to ground level, unnoticed by its occupants. The design of the square columns, eaves and roof system make the Isola 2 extremely compact and aesthetically beautiful. Accessorize your Isola 2 with dimmable LED lights, motorized screens, clear vinyl windows and Somfy® sun, wind, or rain sensors to add automation to your pergola. Available in Charcoal or White.
