

KEDRY SKYLIFE

16.02.2026_rev.00

KE

PRODUCT PLUS

RETRACTABLE

Folding and retractable blades system. The opening and closing blades rotate in a single movement. Maximum dimensions for single module W 450 P 611 cm

COMPACTED BLADES

DIMENSIONS:
28 blades - maximum overall dimensions 106 cm.

MODULAR SYSTEM

infinite number of modules can be installed side by side

Illumination with LED strips external (rgb) and internal, blades.

CLOSURE

Possibility of side closures with vertical drop down screens, sliding glass doors and draped curtains.

A gutter system allows draining of water through the columns. the louver blades have been designed to allow water draining along a built-in gutter, which work even when opening them.

↔ 450 ↻ 611

for module

Pergola awning with foldable aluminum slats consisting of a perimeter support beam and associated gutters that allow water to drain away.

Movement is provided by tubular motors

A structure that stands out for its unlimited mobility in terms of width and depth, with a "clean" aesthetic and no visible screws.

Certified wind resistance up to class 6 according to EN 13561.

Central column

Perimeter beam

WIND RESISTANCE

The wind resistance of an exterior shade system is characterized by its ability to support defined loads by simulating wind with positive or negative pressure. In order to define a correlation between the wind resistance class according to the classes defined by the technical standard EN 13561 and the wind speed expressed in Km / h, a comparative table with the Beaufort scale is used. The Beaufort Scale classifies winds according to the speed at which they blow. Wind speed is measured in kilometers per hour (km / h) or in nodes using a measuring instrument, called anemometer, at a height of about 10 meters above the ground.

	DESCRIPTION	WIND SPEED m/sec	WIND SPEED m/sec	WIND SPEED Nodi	WIND EFFECTS ON THE GROUND	EN 13561
4	Moderate breeze	5,5 - 7,9	20 - 28	11 - 16	It raises dust and bits of paper and moves the small branches of trees.	Class 1
5	Fresh breeze	8,0 - 10,7	29 - 38	17 - 21	Shrubs with leaves begin to sway; inland waters rippling.	Class 2
6	Strong breeze	10,8 - 13,8	39 - 49	22 - 27	Even large branches move, umbrellas are used with difficulty.	Class 3
7	Near gale	13,9 - 17,1	50 - 61	28 - 33	The trees begin to sway; walking is difficult against the wind.	Class 4
8	Gale	17,2 - 20,7	62 - 74	34 - 40	Branches break off from the trees, and it is generally impossible to walk against the wind.	Class 5
9	Strong gale	20,8 - 24,4	75 - 88	41-47	Minor structural damage may be caused to buildings (falling tiles or covers fireplaces).	Class 6

Please note: in wind above the maximum class rating, it is necessary to retract the fabric or move blades to upright. For the evaluation of wind resistance of the perimeter closures (Vertika, Vertika Prime, Line glass) refer to the performance declarations of the products themselves. The opening and closing of the screens can be controlled by installing sensors (sun, wind, rain). These aids do not replace the need for visual monitoring and taking manual action to make the awning safe when winds or loads exceed the product's limits. Therefore, the safety of the product is not guaranteed by the use of sensors.

Although the product is designed and intended for use as solar shading, it can also be used in the rain *.

* Resistance to rainwater can be compromised and therefore cannot be guaranteed in the event of especially adverse weather conditions such as heavy rain or rain accompanied by wind. The water drainage systems must always be properly maintained and kept free from obstructions. The formation of condensation on the fabric is a natural phenomenon not to be considered a defect.

PROOF OF TIGHTNESS TO HEAVY RAIN ON ORIENTABLE LOUVRED PERGOLA (KEDRY SKYLIFE)

N. B. TEST TO BE CONSIDERED VALID ALSO FOR THE MODEL KEDRY PRIME AND ISOLA 3

SAMPLE DIMENSION

4500 X 6050 MM

TEMPERATURE AND HUMIDITY

3,1°C e umidità 69,1% UR

TEST DESCRIPTION

The test consist in dropping a given quantity of water, controlled by a flowmeter, on the upper surface of a pergola at environmental atmospheric pressure. The sample is with dimensions indicated in the enclosed drawings and installed according to the manufacturer's manual. Above the test structure was installed a grid with nozzles placed in order to wet the complete surface.

TEST RESULT

The water dropped on the surface of the pergola was measured through the input flowmeter and pluviometer placed on the pergola surface. The measurement was carried out in 5 minutes (300 s) of stabilized capacity, collecting on the upper surface of the pergola 24 mm of water equivalent to 356 mm / h of water flow rate without the flow system overflowing and without detecting infiltrations in the inner side of the louvres.

 356 mm/h

The KE painting process includes high quality standards, with an 8-stage pre-treatment that includes degreasing, deoxidation, and protective treatments before painting. Thanks to this last phase, components and profiles are further guaranteed against particularly severe environmental situations. At the end of the process the profiles and components are painted with polyester resin-based epoxy powders. Treated components are periodically tested in salt spray according to the ISO 9227 standard to confirm conformity and consistency of the process. The European product standard EN 13561: 2015 defines corrosion resistance classes of the metal parts that make up the product according to the table below. Tests performed on the painted components and profiles allow us to classify the product in the maximum class achievable according to EN 13561: 2015, C2 / 4 (48 h - internal components, 240 h - external components).

Equipped with the most modern process control systems including continuous monitoring in which the working parameters are recorded and corrected every 2 minutes, the new painting process guarantees the high quality characteristics of the product while minimizing the risk of environmental pollution. This is a choice born from the desire to always keep up with technology while guaranteeing operator safety and low environmental impact. Thanks to nanotechnologies, the implemented coating constitutes an excellent base for anchoring paints, ensuring excellent adhesion and resisting corrosion. The plant in which aluminum or galvanized steel products with a length of up to 7 meters can be treated, includes 7 treatment tanks, 1 double compartment drying oven, 1 polymerization oven and 1 purification plant for waste water treatment. The real focus of the plant, however, is the two powder coating booths, each with 4 stations for manual retouching. The booths allow greater production continuity, thanks to a drastic reduction in required stops for color changes.

CORROSION RESISTANCE

Classes	1	2	3	4
Internal components	24	48		
External components		48	96	240

COLOURS

When working with color, we know that our whole world is defined by light. And color is nothing more than a breakdown of light. Objects reflect back to our eyes only the color that defines it. This is why it is so important to recognize the close link between color and matter. For this project, there are three keywords that guide the research: Words, Places, Matters.

WORDS: Naming colors is important to make them familiar and easily recognizable.

PLACES: Places define colors. Recognizing different types of places is a starting point for defining and suggesting color combinations.

MATERIALS: Objects do not exist in isolation, but rather match the environment around them: analyzing the materials that make up the environment itself helps us to make decisions; to decide, for example, if the character of a place is false or if instead it is genuinely artistic.

COLOURS RAL

● Ral standard (without supplement)

There is increasing demand for high-performance buildings that have a very low energy consumption and use energy derived from renewable sources. In particular, the limitation of solar heat gain is one of the most important aspects of summer thermal comfort. Solar shading plays an essential role in this concept. The gtot value determines the ability of the solar shield to maintain, in an environment directly exposed to solar radiation, a more comfortable temperature than that which would occur with the presence of glass alone. The solar heat gains are directly proportional to the total transmittance of solar energy gtot, a value that depends on the glazing and external shielding. The European product standard EN 13561: 2015 and the EN 14501 standard identify 5 energy performance classes as shown in the table below.

Effect of GTOT on thermal comfort					
Gtot value	$\geq 0,50$	$\geq 0,35$ e $< 0,50$	$\geq 0,15$ e $< 0,35$	$\geq 0,10$ e $< 0,15$	$< 0,10$
Class	0	1	2	3	4
	very mild effect	mild effect	moderate effect	good effect	very good effect

Each KE product has a Gtot value according to the shading fabric / profiles used. For details, refer to the information provided with the technical data sheet of the fabric and the CE label.

OPTIONAL SIDE CLOSURES_ LINE GLASS

Sliding windows with frameless doors. Lower track only 18 mm high. Easy installation with left or right hand opening. Side or central closure. Packaging with aligned windows. Height adjustment up to 8 mm for each single door. Removable for easy cleaning. Closure with self-locking and / or lock Waterproofing is not guaranteed during heavy rain or rain with wind.

Technical Details

Vertika is a vertical closure that provides protection from sun and rain.
It can be equipped with WIND BLOCK, a locking tensioning system for the fabric.
With Vertika you can use blackout and filtering fabrics to better manage solar radiation.

The doors have been designed to provide protection from water and wind. They are made from extruded aluminum alloy profiles (EN-AW 6060-T6) and 4 + 4 pvd 0.76 safety and shatterproof laminated glass in accordance with UNI 7697 2014. Doors are available in either one or two door versions.

The interior of the structure can be enhanced with decorative curtains. That extra romantic touch which will surely be appreciated by anyone looking for a little privacy or who want "a room all to themselves".

FABRICS

KE

Thermal comfort blends perfectly with beautiful style thanks to the more than 500 high performance fabrics available. A wide variety of colors, styles and solar shading factors allow for a system that meets your specific needs. All fabrics are CE Certified according to the EN 13561 and EN 14501 technical standards.

Led/m	98 led/m

EN ISO 9001 _ Quality

KE has adopted a Quality Management System compliant with EN ISO 9001 requirements in order to maintain and increase quality and meet the highest customer expectations. This continuous improvement, through the control of all processes and careful evaluation of risks and opportunities, engages the entire organization in the development of systems to ensure the safety and reliability of the product and in the search for innovative solutions and technologies.

OHSAS 18001 _ Safety

KE has activated a Safety Management System as an integral part of its work organization, committing itself to organizing the entire structure in order to pursue the objectives of continuous improvement in terms of safety and health protection. Training, knowledge and compliance with current legislation on health and safety at work, cooperation and collaboration and preventive activities are actively pursued in order to minimize the possibility of non-compliance.

EN ISO 14001 _ Environment

KE is ISO 14001 certified for environmental management and strives to be an example of respect for environmental resources and for the continuous improvement of its environmental management system. It is committed to continuous improvement and pollution prevention in compliance with applicable laws, regulations and standards; systematically detects any environmental impact of manufacturing processes, promotes the culture of recovery and recycling in the company and in the related production chain.

MARK CE _ EN 13561

The CE marking of outdoor awnings is a signal to the Consumer that the product can be sold freely in the EU single market, as it complies with Community provisions which recognize safety as the priority of every product that has this agreed upon reference standard. Verification of wind resistance capacity and the clear indication of the ability of the awning to contribute to the energy savings of the building (Gtot), are some of the commitments that the manufacturer makes to a product that has earned the CE marking. The name of the manufacturer, the reference standard (in our case EN 13561) accompany a product that is properly adapted to European indications.

MARK CE _ EN 1090-1

KE extended the CE marking in 2015 to stationary awnings, which are among the aluminum structural components covered by the international standard EN 1090-1. This marking reflects our use of rigorous structural design and manufacturing with qualified processes, adequate industrial resources and qualified personnel.

The KE B2B order system is a simple and intuitive service for placing orders conveniently online. An attractive graphic design, numerous functionalities and an easy and intuitive use mode that allows to access in real time to all the information related to the history of the orders and to the processing of the current ones. With the Cad Lite 3D Configurator you can configure Genius and Bioclimatica models thanks to a constantly updated online catalogue. Thanks to an easy-to-use interface, it also allows you to formulate a complete quote with minimal error.

**A GROUP,
A VISION,
A GROUP IN EVOLUTION**

Since 1987, KE has been designing and manufacturing arm awnings, cassette awnings, drop awnings, canopies, shelters and is specialised in shading structures that enhance the liveability of outdoor spaces, up to the redesign and restyling of urban furniture. Both for the variety of the range and the depth of the configurations, KE is a manufacturing reality able to satisfy the most demanding requests the most demanding requirements of designers, architects, window and door manufacturers, upholsterers and outdoor professionals.

Improving the experience

With KE's professionalism and experience you can rely on quality products designed to enhance your customers' outdoor experience. With KE it will be easier to live the outdoor space in perfect harmony with the surrounding environment, widening the viewpoints and ensuring maximum comfort in all seasons.
